Now is the time for Laser Cataract Surgery

CATALYS® Precision Laser System

• Tailored treatment customized to your eye

• Laser created precise opening for cataract removal and accurate lens implant placement

• Gentle, low energy procedure minimizes inflammation and helps speed visual recovery

• Reduce your need for glasses with precise corneal incisions and specific lens implants
Customized cataract procedure to provide the best visual outcome with exceptional comfort.

**Vision with a Cataract**
As the eye ages, the lens becomes cloudier, allowing less light to pass through. The light that does make it to the retina is diffused and scattered, making vision unfocused and blurry.

**Vision with a Monofocal Lens**
A lens with a single focal point, designed to correct cataracts and provide distance vision while offering enhanced image quality. Mild to moderate astigmatism can also be corrected.

**Vision with an Astigmatism Correcting Monofocal lens**
A lens with a single focal point, designed to correct both cataracts and moderate to severe astigmatism. Provides distance vision while offering enhanced image quality.

**Vision with a Multifocal Lens**
A lens with multiple focal points, designed to replace cataracts and correct presbyopia in order to provide a full range of vision: near, far, and in-between, while offering enhanced image quality.
